

Fact sheet

New Segment Reporting

With the business year 2009, Tognum has changed its segment reporting. Earlier, the company had reorganized internally and further developed its brand strategy; these changes are now taken into account by the reporting structure.

As a specialist for propulsion and power solutions, Tognum covers two operative business units: "Engines" for high-performance diesel engines as well as complete drive solutions and "Onsite Energy & Components" for decentralized power systems and components. With MTU Onsite Energy, Tognum introduced a new brand in September 2008, which the group of companies now uses for marketing all solutions for decentralized power generation on the basis of diesel and gas engines as well as fuel cells.

The new reporting now includes three reporting segments: "Engines", "Onsite Energy & Components" and the newly established segment "Distribution".

The most significant results of the new reporting structure:

- Engines which are installed in decentralized power systems, now belong to the current reporting segment "Onsite Energy & Components". Previously, they had been included in the reporting segment "Engines".
- In the future, the figures from foreign Group subsidiaries, especially those in Regions Europe and Asia, will be partly consolidated in the "Distribution" segment.
